Generator Capacity Calculator

Toggle the appliances you want to power. The calculator shows your total load vs your generator's capacity in real time.

My generator rated watts: 7500 watts

Your Load	350 W
Refrigerator	150 W ☐
Well Pump (1/2 HP)	1,000 W ☐
Central AC (3-ton)	3,500 W ☐
Window AC Unit	1,200 W ☐
Sump Pump	800 W ☐
Lights (10 LEDs)	100 W ☐
Phone / Router / TV	250 W ☐
Space Heater	1,500 W ☐
Microwave	1,000 W ☐
Electric Water Heater	4,500 W ☐

Capacity Used 5%

> **Stay under 80%.** If your generator is 7,500W, keep your load under 6,000W. Gives headroom for starting surges.

📝 Maintenance Schedule

Your generator cost $800 to $2,000. 30 minutes a quarter protects that investment.

Task	Monthly	Quarterly	Annual
Run 15-20 min	●		
Check oil level	●		
Change oil		●	
Clean/replace air filter		●	
Check spark plug		●	
Add fuel stabilizer		●	
Inspect power cord		●	
Inspect inlet box			●
Test interlock			●

Task	Monthly	Quarterly	Annual
Replace spark plug			●

> **#1 failure cause:** stale fuel. Run it 15 minutes monthly. That alone prevents most problems.

🆘 Emergency Contact Card

Fill this in and bookmark this page, or print it and tape to your breaker panel.
